CUTTING FLUIDS DIRECT

SterlingCool-PlasmaCut

SterlingCool-PlasmaCut is a perfect replacement for overpriced brands like GreenCut, Pico Quench Guard, Plasma Quench, and others. Our SterlingCool-PlasmaCut provides superior results but at a lower price than most competitors, plus SHIPPING IS FREE! (there is a very small flat rate shipping fee for orders shipped to CA, WA and OR).

Proudly made in the USA, SterlingCool-PlasmaCut is an extremely premium plasma water table additive that will absolutely prevent rust, bacteria/mold growth, insect infestation, foul smells, white residue build-up, etc. It will not foam and it is terrific on all metals (including aluminum) and most importantly, it does all of this while being 100% safe and operator friendly! SterlingCool-PlasmaCut is trusted and used in thousands of plasma water tables, including being used by some of the largest manufacturing companies in the US. Our customers love SterlingCool-PlasmaCut simply because it delivers incredible results at an unbeatable price. It mixes at 20:1 (1 gallon of PlasmaCut for every 20 gallons of water) and is unique from the competition in that our SterlingCool-PlasmaCut forces "slag" to ball up as it falls to the bottom of the table, making it easier to remove. It also rejects tramp oil/debris, keeping your table cleaner for longer periods of time and saving you even more money!

LAB DATA

LAB DATA	
Appearance	Blue/Clear
PH @ 5% Mix	9.5
